PROGRAM STUDI S.Tr SISTEM INFORMASI KOTA CERDAS

FAKULTAS ILMU TERAPAN

UNIVERSITAS TELKOM

BANDUNG

2026

A. Tujuan Praktikum

Setelah menyelesaikan praktikum ini, mahasiswa diharapkan mampu:

1. Memahami konsep dan fungsi framework dalam pengembangan aplikasi web.
2. Memahami arsitektur MVC (Model-View-Controller).
3. Menjelaskan arsitektur dan konsep dasar CodeIgniter 3.
4. Menginstal dan mengonfigurasi CodeIgniter 3.
5. Membuat routing dan controller pada CI3.
6. Mengimplementasikan view dan template system.
7. Menghubungkan model dengan database.
8. Mengintegrasikan komponen MVC menjadi aplikasi utuh.
9. Mengimplementasikan form handling dan validation.
10. Mengelola session, autentikasi, dan role management.
11. Menerapkan praktik keamanan dasar pada aplikasi CI3.

B. Alat dan Bahan

Untuk melaksanakan praktikum ini, diperlukan:

1. Laptop/PC dengan XAMPP terinstal.
2. PHP versi minimal 7.x.
3. Database MySQL/MariaDB.
4. Code Editor (VS Code/Sublime/PHPStorm).
5. Browser (Chrome/Firefox).
6. CodeIgniter 3 (download dari <https://codeigniter.com>).

C. Langkah-Langkah Praktikum

1. Buat database dengan nama 'ci3_project'
2. buat tabel dengan nama 'posts'

3. buat struktur tabel sebagaimana data berikut ini

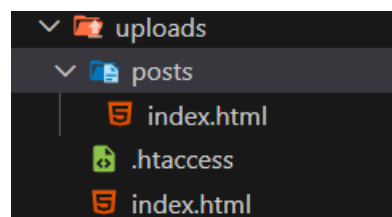

The screenshot shows the phpMyAdmin interface with the 'posts' table selected. The table structure is as follows:

#	Nama	Jenis	Penyortiran	Atribut	Tak Terimal	Bawaan	Komentar	Ekstra	Tindakan
1	id	int(11)			Tidak	Tidak ada		AUTO_INCREMENT	Ubah Hapus Lainnya
2	title	varchar(255)	utf8mb4_general_ci		Tidak	Tidak ada			Ubah Hapus Lainnya
3	author	varchar(255)	utf8mb4_general_ci		Tidak	Tidak ada			Ubah Hapus Lainnya
4	article	text	utf8mb4_general_ci		Tidak	Tidak ada			Ubah Hapus Lainnya
5	image	varchar(255)	utf8mb4_general_ci		Ya	NULL			Ubah Hapus Lainnya
6	created_at	timestamp			Tidak	current_timestamp()			Ubah Hapus Lainnya
7	updated_at	timestamp			Tidak	current_timestamp()		ON UPDATE CURRENT_TIMESTAMP()	Ubah Hapus Lainnya

4. Konfigurasi database di **application/config/database.php** dan sesuaikan nama database yang telah di buat

5. Pada **application/config/routes.php** ganti **\$route['default_controller'] = 'posts'**; agar menjadi default yang tampil utama

6. Buat folder **uploads** di pada main project, kemudian buat file dan folder sebagaimana data berikut ini

7. Pada semua file indeks.html yang berada di dalam folder uploads dan posts isikan program sebagai berikut

```
uploads > posts > index.html > ...
1 <!DOCTYPE html>
2 <html>
3 <head>
4 | <title>403 Forbidden</title>
5 </head>
6 <body>
7
8 <p>Directory access is forbidden.</p>
9
10 </body>
11 </html>
12
```

8. Pada file .htaccess isikan data berikut ini

```

uploads > .htaccess > abc # Allow image files
1  # Prevent directory listing
2  Options -Indexes
3
4  # Allow image files
5  <FilesMatch "\.(jpg|jpeg|png|gif)$">
6      Order Allow,Deny
7      Allow from all
8  </FilesMatch>

```

9. Buat file **Posts.php** dibagian **Controller** seabgai berikut

```

application > controllers > Posts.php > PHP Intelephense > Posts
1  <?php
2  defined('BASEPATH') OR exit('No direct script access allowed');
3
4  class Posts extends CI_Controller {
5
6      public function __construct()
7      {
8          parent::__construct();
9          $this->load->model('Post_model');
10         $this->load->helper(array('url', 'form'));
11         $this->load->library(array('form_validation', 'upload', 'session'));
12     }
13
14     /**
15      * Display all posts
16      */
17     public function index()
18     {
19         $data['posts'] = $this->Post_model->get_all();
20         $data['title'] = 'All Posts';
21
22         $this->load->view('posts/index', $data);
23     }
24
25     /**
26      * Show create form
27      */
28     public function create()
29     {
30         $data['title'] = 'Create New Post';
31         $this->load->view('posts/create', $data);
32     }
33 }

```

```

33
34     /**
35     * Store new post
36     */
37     public function store()
38     {
39         // Set validation rules
40         $this->form_validation->set_rules('title', 'Title', 'required|max_length[255]');
41         $this->form_validation->set_rules('author', 'Author', 'required|max_length[255]');
42         $this->form_validation->set_rules('article', 'Article', 'required');
43
44         if ($this->form_validation->run() === FALSE) {
45             $this->session->set_flashdata('error', validation_errors());
46             redirect('posts/create');
47             return;
48         }
49
50         $data = array(
51             'title' => $this->input->post('title'),
52             'author' => $this->input->post('author'),
53             'article' => $this->input->post('article'),
54             'created_at' => date('Y-m-d H:i:s'),
55             'updated_at' => date('Y-m-d H:i:s')
56         );
57

```

```

58         // Handle image upload
59         if (!empty($_FILES['image']['name'])) {
60             $upload_result = $this->upload_image();
61
62             if ($upload_result['status']) {

253             'error' => $this->upload->display_errors('', '')
254         );
255     }
256 }
257 }

```

10. Buat file **Post_model.php** pada folder **models** dan isikan program sebagai berikut ini

```

1  <?php
2  defined('BASEPATH') OR exit('No direct script access allowed');
3
4  class Post_model extends CI_Model {
5
6      private $table = 'posts';
7
8      public function __construct()
9      {
10         parent::__construct();
11         $this->load->database();
12     }
13
14     /**
15      * Get all posts
16      */
17     public function get_all()
18     {
19         $query = $this->db->get($this->table);
20         $posts = $query->result();
21
22         // Add image_url to each post
23         foreach ($posts as $post) {
24             if ($post->image) {
25                 $imagePath = str_replace('posts/', '', $post->image);
26                 $post->image_url = base_url('uploads/posts/' . $imagePath);
27             } else {
28                 $post->image_url = null;
29             }
30         }
31
32         return $posts;
33     }

```

```

34
35     /**
36     * Get post by ID
37     */
38     public function get_by_id($id)
39     {
40         $query = $this->db->get_where($this->table, array('id' => $id));
41         $post = $query->row();
42
43         if ($post && $post->image) {
44             $imagePath = str_replace('posts/', '', $post->image);
45             $post->image_url = base_url('uploads/posts/' . $imagePath);
46         }
47
48         return $post;
49     }
50
51     /**
52     * Insert new post
53     */
54     public function insert($data)
55     {
56         $this->db->insert($this->table, $data);
57         return $this->db->insert_id();
58     }
59
60     /**
61     * Update post
62     */
63     public function update($id, $data)
64     {
65         $this->db->where('id', $id);
66         return $this->db->update($this->table, $data);
67     }

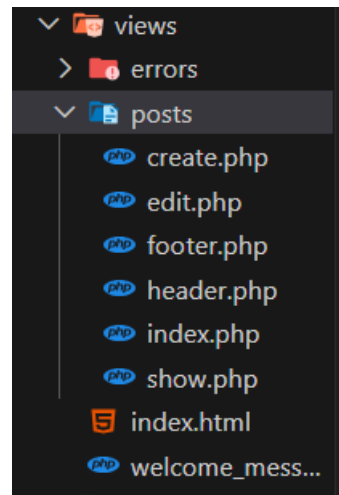

```

```

68
69     /**
70     * Delete post
71     */
72     public function delete($id)
73     {
74         $this->db->where('id', $id);
75         return $this->db->delete($this->table);
76     }
77
78     /**
79     * Check if post exists
80     */
81     public function exists($id)
82     {
83         $query = $this->db->get_where($this->table, array('id' => $id));
84         return $query->num_rows() > 0;
85     }
86 }

```

11. Buat folder **posts** pada folder **views**, kemudian buat file php sebagai mana data berikut ini

12. Pada **header.php** isikan program seabgai berikut

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4     <meta charset="UTF-8">
5     <meta name="viewport" content="width=device-width, initial-scale=1.0">
6     <title><?php echo isset($title) ? $title : 'Posts Application'; ?> - CI3 CRUD</title>
7 </head>
8 <body>
9     <div class="container">
10         <div class="header">
11             <h1>Posts Application</h1>
12         </div>
13         <div class="content">
14             <div class="card">
15                 <div class="card-header">
16                     <h2>Posts</h2>
17                 </div>
18                 <div class="card-body">
19                     <div class="row">
20                         <div class="col">
21                             <div class="card">
22                                 <div class="card-header">
23                                     <h3>Create Post</h3>
24                                 </div>
25                                 <div class="card-body">
26                                     <div class="form-group">
27                                         <input type="text" value="Title" />
28                                     </div>
29                                     <div class="form-group">
30                                         <input type="text" value="Content" />
31                                     </div>

D. Hasil dan Dokumentasi Perogram

TUGAS PRAKTIKUM

17. Buatlah aplikasi web sederhana menggunakan CodeIgniter 3 yang mengimplementasikan fitur CRUD (Create, Read, Update, Delete) serta upload file sesuai dengan rancangan Tugas Besar Saudara. Aplikasi minimal memiliki satu halaman utama (dashboard) yang hanya dapat diakses setelah proses login berhasil. Pada proses penyimpanan data, gunakan satu tombol "Simpan" yang berfungsi untuk menjalankan proses CRUD sekaligus melakukan upload file dalam satu kali submit.

Buat database dengan nama **finbisku_app** dan buat dua tabel dengan nama **profiles** dan **users** dengan masing masing tabel berisi kolom seperti gambar dibawah.

The screenshot shows the 'Table structure' view for the 'profiles' table. The table has the following columns:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	id	int(11)			No	None		AUTO_INCREMENT	Change Drop More
2	user_id	int(11)			Yes	NULL			Change Drop More
3	nama_usaha	varchar(100)	utf8mb4_general_ci		Yes	NULL			Change Drop More
4	jenis_usaha	varchar(100)	utf8mb4_general_ci		Yes	NULL			Change Drop More
5	tentang	text	utf8mb4_general_ci		Yes	NULL			Change Drop More
6	foto	varchar(255)	utf8mb4_general_ci		Yes	NULL			Change Drop More
7	updated_at	timestamp			No	current_timestamp()			Change Drop More

Gambar tabel profiles

The screenshot shows the 'Table structure' view for the 'users' table. The table has the following columns:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	id	int(11)			No	None		AUTO_INCREMENT	Change Drop More
2	nama	varchar(100)	utf8mb4_general_ci		Yes	NULL			Change Drop More
3	email	varchar(100)	utf8mb4_general_ci		Yes	NULL			Change Drop More
4	password	varchar(255)	utf8mb4_general_ci		Yes	NULL			Change Drop More
5	created_at	timestamp			No	current_timestamp()			Change Drop More

Gambar tabel users

The screenshot shows the phpMyAdmin interface. On the left is the database navigation tree with 'users' selected. The main area displays the 'users' table structure with columns: id, nama, email, password, and created_at. Below the structure, the table data is shown with 4 rows of user information.

HALAMAN SETELAH LOGIN

The dashboard features a large orange header with the title 'Kelola Keuangan UMKM Lebih Mudah & Cerdas'. Below the header, there's a description of the system's benefits. At the bottom, three white boxes display key statistics: '100+ UMKM Terbantu', '5.000+ Transaksi Dicatat', and '99% Data Aman'. Two buttons, 'Mulai Sekarang' and 'Pelajari Fitur', are located on the right side of the header.

Pusat Informasi Dan Kolaborasi UMKM

Sumber informasi resmi pemerintah daerah terkait kebijakan UMKM, jadwal sosialisasi dan pelatihan, serta peta kegiatan bazar yang dapat diakses oleh seluruh pelaku UMKM.

Blogs Finbisku

Halaman ini dirancang sebagai ruang kolaborasi antara pemerintah dan pelaku UMKM untuk tumbuh bersama. Berbagai informasi penting seperti peta bazar UMKM, kebijakan terbaru, serta jadwal pelatihan dan sosialisasi disajikan secara terbuka dan mudah diakses, agar pelaku usaha tidak tertinggal informasi. Mari manfaatkan teknologi

E. Analisis dan Pembahasan

Pada praktikum ini dilakukan implementasi konsep **CRUD (Create, Read, Update, Delete)** menggunakan PHP dan MySQL dalam sebuah sistem sederhana berbasis web. Sistem yang dibangun mencakup fitur registrasi, login, serta pengelolaan data profil pengguna, sehingga mencerminkan alur pengolahan data secara lengkap.

Penerapan arsitektur **Model-View-Controller (MVC)** pada framework CodeIgniter 3 dalam sistem FINBISKU bertujuan untuk memisahkan logika aplikasi, tampilan, dan pengelolaan data. Pada sistem ini, komponen **Model** bertanggung jawab mengelola interaksi dengan database seperti proses registrasi pengguna dan penyimpanan profil usaha. **View** digunakan untuk menampilkan antarmuka seperti halaman login, registrasi, dan profil, sedangkan **Controller** menjadi penghubung yang mengatur alur data antara Model dan View. Pemisahan ini membuat struktur kode lebih terorganisir dibandingkan pendekatan PHP prosedural yang sebelumnya digunakan.

Dalam implementasinya, fitur utama seperti autentikasi pengguna (login dan register) serta pengelolaan profil usaha telah berhasil dikonversi ke dalam pola MVC. Controller seperti *Auth* dan *Profile* menangani proses bisnis, termasuk validasi input dan pengaturan session. Model seperti *User_model* dan *Profile_model* berfungsi untuk menjalankan query database secara terpusat, sehingga meningkatkan keamanan dan konsistensi data. Sementara itu, View hanya berfokus pada tampilan tanpa mengandung logika bisnis, yang membuat kode lebih mudah dipahami dan dikembangkan.

Dari sisi pengembangan, penggunaan MVC pada CodeIgniter 3 memberikan kemudahan dalam maintenance dan pengembangan fitur lanjutan. Perubahan pada tampilan tidak akan memengaruhi logika program, begitu juga sebaliknya. Selain itu, framework ini menyediakan fitur bawaan seperti routing, session management, dan helper yang mempercepat proses pengembangan. Hal ini sangat membantu dalam

proses konversi dari sistem lama ke sistem berbasis framework yang lebih terstruktur.

Namun, dalam proses implementasi ditemukan beberapa kendala, seperti kesalahan konfigurasi routing, penggunaan URL yang belum sesuai dengan konsep MVC, serta adaptasi dari penggunaan file PHP langsung ke sistem berbasis controller. Kendala tersebut menunjukkan bahwa pemahaman terhadap alur kerja MVC sangat penting agar sistem dapat berjalan dengan optimal. Setelah dilakukan perbaikan, sistem dapat berjalan dengan lebih stabil dan terstruktur.

Penerapan arsitektur MVC menggunakan CodeIgniter 3 pada sistem FINBISKU berhasil meningkatkan struktur, keteraturan, dan maintainability aplikasi dibandingkan dengan pendekatan sebelumnya. Dengan pemisahan yang jelas antara Model, View, dan Controller, sistem menjadi lebih mudah dikembangkan, dikelola, serta lebih siap untuk pengembangan fitur lanjutan di masa mendatang.
